Release 1.1.0 - February 02, 2026

Release Highlights & Important Notes

Detailed information about significant changes, new features, and important considerations for 1.1.0.

Please review breaking changes and deprecations carefully before upgrading.

🛑 Breaking Changes

Application Programming Interface

The API now includes standard `X-RateLimit-*` headers in all responses to better inform consumers of usage thresholds.

> **NOTE:** The default rate limit remains unchanged.

⭐ Highlighted Features

Web User Interface

Introduces an interactive editor directly in the dashboard, allowing users to modify widgets without navigating away.

This significantly streamlines common tasks.

Application Programming Interface

A new batch export endpoint is now available at `/api/export/batch`. Supported formats:

- CSV (default)
- JSON with optional compression

Example usage:

```
curl -X POST /api/export/batch \
  -H "Content-Type: application/json" \
  -d '{"format": "csv", "ids": [1,2,3]}'
```
