Release History — 1.1.0 - 2026-02-02

Changelog

Summaries of all user-facing changes made since the previous release.

New features

API

Add batch export API endpoint
NOTE

Bug fixes

Web UI

Fix modal overflow on small screens
NOTE

API

Fix JSON serialization issue with null values
NOTE

Improvements

Web UI

Add inline editing to dashboard widgets
NOTE

Add missing keyboard shortcuts to Help page
NOTE

API

Add rate limiting headers to public API
NOTE

Release Notes

Descriptions of any specially notable changes or additions since the previous release.

Breaking Changes

Improvements

The API now includes standard `X-RateLimit-*` headers in all responses to better inform consumers of usage thresholds.

> **NOTE:** The default rate limit remains unchanged.

Highlighted

New features

A new batch export endpoint is now available at `/api/export/batch`. Supported formats:

- CSV (default)
- JSON with optional compression

Example usage:

```
curl -X POST /api/export/batch \
  -H "Content-Type: application/json" \
  -d '{"format": "csv", "ids": [1,2,3]}'
```

Improvements

Introduces an interactive editor directly in the dashboard, allowing users to modify widgets without navigating away.

This significantly streamlines common tasks.
