Release 1.1.0 - 2026-02-02

Notable Changes

Detailed information about significant changes that may affect users.

Highlighted Features

Collaboration

Introduced real-time collaboration features allowing multiple users to edit documents simultaneously. Changes are synchronized instantly across all connected clients with conflict resolution.

Search & Discovery

Added advanced search capabilities with filtering options including:

- Date ranges
- Content types
- User assignments
- Status filters
- Custom tags

Search results are now more precise and easier to navigate.

AI Features

Introduced experimental AI-powered content suggestions to help users create better content. This feature:

- Suggests improvements to writing
- Recommends relevant tags
- Provides content structure guidance

> ℹ️ This is an experimental feature and may change in future releases.

Security

Fixed a critical security vulnerability that could potentially allow authentication bypass under specific conditions. All users are strongly encouraged to update immediately.

Security Updates

Security

Fixed a critical security vulnerability that could potentially allow authentication bypass under specific conditions. All users are strongly encouraged to update immediately.

Breaking Changes

Configuration

Removed the following deprecated configuration options:

- `legacy_mode` (use `compatibility.legacy_support` instead)
- `old_api_format` (use `api.response_format` instead)
- `deprecated_auth` (OAuth2 is now required)

Please update your configuration files accordingly.

Removed Features

Configuration

Removed the following deprecated configuration options:

- `legacy_mode` (use `compatibility.legacy_support` instead)
- `old_api_format` (use `api.response_format` instead)
- `deprecated_auth` (OAuth2 is now required)

Please update your configuration files accordingly.

Experimental Features

AI Features

Introduced experimental AI-powered content suggestions to help users create better content. This feature:

- Suggests improvements to writing
- Recommends relevant tags
- Provides content structure guidance

> 🛈   This is an experimental feature and may change in future releases.

Changes

All changes included in this release (using label-based tagging).

Collaboration

Improvements

0. Implemented real-time collaboration features
   NOTE

Search & Discovery

Improvements

0. Added advanced search with filters
   NOTE

Database

Improvements

0. Migrated to new database schema
   NOTE

AI Features

Improvements

0. Added experimental AI-powered suggestions
   NOTE

Performance

Improvements

0. Migrated to new database schema
