1.1.1 Release - February 02, 2026

Release Notes & Highlights

Detailed information about the most important changes in 1.1.1.

This section focuses on changes that directly impact users and require attention during upgrades.

Fixed a critical issue preventing Safari users from logging in. The problem was related to cookie handling changes introduced in the previous release.

Fixed a memory leak in the real-time collaboration feature that could cause performance degradation during long editing sessions.

Fixed an issue where advanced search filters would not reset properly when clearing search terms, causing unexpected search results.

Improved error messages during OAuth2 setup to provide clearer guidance when configuration issues are encountered.

Added loading indicators for AI-powered suggestions to provide better feedback when suggestions are being generated.
