

Release History — 1.1.0 - 2026-05-29

What's Changed

Summary of all changes in this release (using label-based tagging).

- Add dark mode toggle to user preferences
[NOTE](#)
- Fix memory leak in background sync process
[NOTE](#)
- Implement OAuth2 authentication flow
[NOTE](#)
- Add keyboard shortcuts for common actions
[NOTE](#)
- Deprecate legacy API endpoints
[NOTE](#)
- Update documentation for new features

Release Notes

Descriptions of any specially notable changes or additions since the previous release.

Introduced a dark mode toggle in user preferences, allowing users to switch between light and dark themes. The setting is automatically saved and persists across sessions.

Fixed a memory leak in the background synchronization process that was causing gradual performance degradation. Users should notice improved stability during long sessions.

Implemented OAuth2 authentication flow to replace basic authentication. This provides enhanced security and enables seamless integration with third-party services.

Breaking Change: Basic authentication will be deprecated in v1.2.0. Please migrate to OAuth2 before then.

Added keyboard shortcuts for common actions:

- **Ctrl+N / Cmd+N**: Create new item
- **Ctrl+S / Cmd+S**: Save current work
- **Ctrl+F / Cmd+F**: Open search
- **Esc**: Close modals/dialogs

The following legacy API endpoints are now deprecated and will be removed in v1.3.0:

- `/api/v1/users` → Use `/api/v2/users` instead
- `/api/v1/projects` → Use `/api/v2/projects` instead
- `/api/v1/tasks` → Use `/api/v2/tasks` instead

The new endpoints provide better performance and additional features.
